Tipper-cover systems

Tipper-cover systems are already integrated in the Netherlands. VAKO produces and is selling this product for several dutch transport companies. Advantages are:
 - very quick operation of the 2 covers
 - cabine controlled
 - almost no mechanical wear and low maintenance
 - 100% reliable system
 - light weight aluminium or plastic materials used

VAKOV technical specifications

Max. tipping cap.:	35tons
tipping speed:	30sec
Max. tipping angle:	60 degrees
Total length:	6813mm
Total width:	2430mm
Total skeleton height:	200mm
Weight unloaded:	2835kg
Compatible for all 20' containers	

- options:**
- a. Hydraulic driven support at the rear:**
 1. Hydr. horizontal slide of beams
 2. Hydr. 90 degrees movement
 3. Hydr. Stabilisors
 - b. HONDA motor V-twin 2-cil. 18kw**
 - c. Wet kit for self-supporting device**
 - d. Forklift holes**
 - e. Device-hinges before rear twistlocks for a better axle-weight-separation**

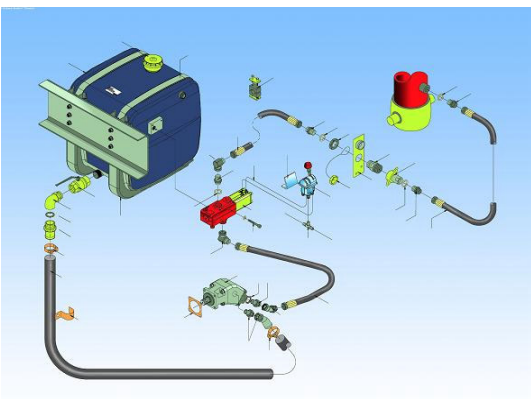

NEW !! VAKOV 20' container tipping device

This self-supporting tipping device is used for all several multifunctional container chassis for transporting and tipping 20ft containers, even much heavier then 20-30 tons, (max. weight per axle!) Loads up to 30 tons can be carried out using a 40' retractable chassis. The device is completely removable. Maximum height of the skeleton is only 20cm. At the front and rearside of the device are mechanical or optional hydraulic supports mounted. When the chassis is lowered in the airsuspension it allows the driver to leave the device behind.

The VAKOV device can be easily put away. With a forklift or a spreader the skeleton can be put away on other containers for example. This will save a lot of space, and the fact that there are no wheels mounted reduces the maintenance to a minimum.

Hydraulic wet kit's

VAKO can help you select your hydraulic kit or installation and can support you with all important technical documentation. Using a complete VAKO kit gives you the following advantages:

- You can rely on our extensive experience and top-quality components
- All parts are compatible so you can equip your trucks quickly and efficiently
- You only have one source of technical information
- Reduced handling and administration costs
- In our own workshop we build the wet kit and all other hydraulic accessoires
- All parts are very quick to deliver.

call **VAKO Truck Hydrauliek** also for: oilcoolers - tipping valves - pumps - oiltanks - cabcontrols - PTO's and more...
